The Paralympic Games: A bibliography

Paralympic Games

"The Paralympic Games are the pinnacle event of the International Paralympic Committee and the showcase of elite performance for athletes with disabilities. They are considered a 'parallel' movement to the Olympics. The Paralympics are held every four years generally after the Olympic Games, and mostly, in the same host City as the Olympic Games. They include the disability categories of: Amputee; Cerebral palsy; Intellectual disability; Vision impaired; Wheelchair; and Les autres. The Paralympics have grown rapidly since their inception to become part of a global network of sports events. In doing so they have brought an increased visibility and status to people with disabilities by focusing on their abilities".

Darcy, S. (2005). Paralympics. In J. M. Jenkins & J. J. Pigram (Eds.), *Encyclopedia of Leisure and Outdoor Recreation* (pp. 350-351). New York and London: Routledge – Taylor & Francis Group.

- This bibliography is organised alphabetically by author in APA Style, with keywords, including particular host city names, appearing in square brackets at the end of each reference. A list of Keywords is provided at the end of the bibliography.
- The Adobe Acrobat search facility can be used to locate items by keyword or any other word or name in the reference.
- References in this bibliography are principally from refereed academic journals, texts, theses, and from conference proceedings.
- Brief abstracts are given where possible. To be copyright compliant, these abstracts comprise approximately 10% of the published abstract.
- Electronic documents available via the Internet are not included. Links to Paralympic Games electronic resources are available from the ACEM – Resources website at <http://www.business.uts.edu.au/acem/resources/paralympic.html>

Alexander, D. (2005). *Vancouver's support of the 2010 Winter Olympic bid: An analysis of the 2003 Olympic plebiscite*. Unpublished M.A. dissertation, Royal Roads University (Canada), Canada. [politics ; Vancouver ; history]
ABSTRACT: This study is a critical analysis of the marketing and communication strategies that took place in Vancouver, British Columbia during a citywide plebiscite associated with their bid to become host city for the 2010 Olympic and Paralympic Winter Games.

Alexander, M. G. F. (2008). *Social Skills and Sports (S3) program: Developing the social skills of young adult Special Olympics athletes*. Unpublished Ph.D. dissertation, Michigan State University, Michigan. [intellectual disability ; social skills; Special Olympics]
ABSTRACT: The Social Skills and Sports (S3) program was designed to teach social skills to people with intellectual disabilities within a sports setting. The purpose of the study was to determine if participants could develop and refine the target social skills as a result of S3 ; generalize social skills to other environments; and maintain social skills five weeks after the completion of the intervention.

Cashman, R. & Darcy, S.A. (2008). (eds), *Benchmark games*, Walla Walla Press, Sydney. [Paralympic movement ; evaluation ; planning ; mass media ; Sydney]

ABSTRACT: This analysis of the Sydney 2000 Paralympic Games, explores many questions and issues pertinent to the Paralympic Movement. It is the first book of its kind to analyse an individual Paralympic Games, providing a unique evaluation of the operation and organisation of disability sport. A vast cross-section of areas is assessed, including the operational planning and infrastructure, the role of the media and the delivery of sport.

Darcy, S. (1997). *Tourism patterns and experiences of New South Wales people with a physical disability*. Paper presented at the Tourism research: building a better industry, Canberra. [research ; tourism ; Sydney]
ABSTRACT: This paper presents the findings of research conducted into the tourism patterns and experiences people with physical disabilities in New South Wales. The research methodology was a questionnaire-based self-completed postal survey ducted with the co-operation of nine major organisations which represent people with a physical disability in New South Wales. The questionnaire replicated sections of the International Visitor Survey and Domestic Tourism Monitor so comparisons could be made between the general population and people with a physical disability. The paper develops the concept of access precincts as a way for government and the tourism industry to better serve the touristic needs of people with a disability. Also the study provides government agencies and the tourism industry with information to capitalise on the potential offered by the impending Sydney Olympics and Paralympics. (author abstract)

Darcy, S. (1998). *Anxiety to access: The tourism patterns and experiences of New South Wales people with a physical disability*. Sydney: Tourism New South Wales. [accessibility ; tourism ; constraints ; Sydney]
ABSTRACT: The report provides the first quantitative investigation of the tourism patterns and experiences of people with disabilities in Australia. The report exposes the fact that people with a disability find it difficult to find attractions and accommodation that take their needs into account. The information provides a sound platform to redress many of the barriers and constraints people with disabilities face when traveling. Further, the research report provides government agencies and the tourism industry with information to capitalise on the potential offered by the impending Sydney Olympics and Paralympics 2000. (author abstract)

Darcy, S. (2001). A Games for everyone?: Planning for disability and access at the Sydney 2000 Games. *Disability Studies Quarterly*, 21(3). [accessibility ; planning ; Sydney]
ABSTRACT: Darcy (2001) examines the planning processes leading up to the Sydney 2000 Paralympic and Olympic Games from a disability perspective. The Sydney Games, and the Paralympics in particular, were seen as a possible watershed event for raising the profile and planning of disability and access issues in Sydney. From their outset, the Games sought to incorporate disability and ageing related issues within the overall planning strategy. The paper will firstly examine the major bodies charged with organising the Games and the planning processes used to incorporate disability and access issues. These include the Sydney Organising Committee for the Olympic Games (SOCOG), the Sydney Paralympic Organising Committee (SPOC), the Olympic Co-ordination Authority (OCA) and the Olympic Roads and Traffic Authority (ORTA). Secondly, the paper will review the operational issues faced by people

with disabilities in the test events leading up to the Games period. The method for identifying the operational issues included: ongoing consultation with peak disability groups; recruitment of people with disabilities to participate in all aspects of the test events; assessment of these groups' experiences through a questionnaire based survey instrument and a phone in reporting service. These data sources were complemented through peak disability organizations member feedback, and monitoring of media reports. The analysis will investigate issues of transport, accessibility of the urban domain, ticketing, and wider social impacts. Lastly, the paper will discuss the likelihood of any lasting legacies that the 2000 Games may have for Sydney's community of people with disabilities. (author abstract)

Darcy, S. (2003). The politics of disability and access: the Sydney 2000 Games experience. *Disability & Society*, 18(6), 737-757. [politics ; accessibility ; Sydney]

Abstract: The article examines disability and access issues surrounding the Sydney 2000 Olympic and Paralympic Games. Central to this is an examination of the involvement of the Australian community of people with disabilities [1] within the Games. The Sydney Paralympic Games, in particular, was seen as a possible watershed event for developing accessible infrastructure, and raising awareness of disability and access issues. This paper draws on the official documents of the Games, newspaper accounts and disability organisation reports. The article first examines the major bodies charged with organising the Games, and the planning processes used to incorporate disability and access issues. It then examines a range of critical issues and their relationships with the disability community. Finally, the article provides an analysis of any likely legacies that the 2000 Games may have for Sydney's community of people with disabilities. (author abstract)

Harada, C. M. (2007). *Motivation for sport participation and withdrawal for Special Olympics athletes in the United States*. Unpublished Ed.D. dissertation, Boston University, Massachusetts.

[motivation ;
participation ; intellectual disability ; Special Olympics]

ABSTRACT: The purpose of this study was to examine the motives for participation in and withdrawal from sport of Special Olympics (SO) athletes using the frameworks of motivation in sport for athletes without disabilities. Two theoretical frameworks were applied--achievement motivation and self-determination theory (SDT). Previous studies on the application of SDT to understanding motivation in people with intellectual disabilities (ID) were examined.
